

Momentum Price Update

Easily manage your pricing and margins

Full visibility and management of pricing and margins

Need to manage your inventory margins? Need more flexible price update options? Momentum Price Update is the solution.

Consider this scenario, a business buys products of a particular category, for e.g. hose fittings. They all belong to the same product category (stock group), but low-cost items can be sold at a much higher margin than higher cost items. For e.g. items bought for less than \$2 can be sold at an 80% margin, while items over \$2 are sold at a 60% margin.

Standard pricing features in MYOB EXO can make this a challenge, or at the very least a slow process. Some of our customers export the items to excel, use the formulas to calculate the prices, and then re-import the spreadsheet.

Momentum Price Update enables formulas to be set in the application so you can quickly update prices.

Key Features

- Provides greater flexibility than standard EXO pricing options
- Ability to select items based on their cost (e.g. < \$2) and apply a margin
- Use formulas to calculate and update new sell prices

Select	StockCode	Description	Primary Group	Secondary Group	Supplier	Avg Cost	SELLPRICE1	Sellprice1_New
<input type="checkbox"/>	@		MISC ITEMS	NO GROUP SELECTED	MISC PURCHASES	0.00	0.00	0.00

Momentum Price Update

Easily manage your pricing and margins

What our customer had to say:

"When we converted from our old software package to MYOB EXO, this was a feature we really needed. Momentum developed the application for our business, and it's enabled us to easily manage our pricing and margin."

"If we didn't have Momentum Price Update, we'd be spending at least one day per month manually updating prices and our margins would have suffered also. We've never had a single problem with the application" – Michelle Williams, Brisbane Sound Group.

Minimal Training and Setup

Momentum Price Update requires minimal training and setup and utilizes mostly standard features of MYOB EXO Business.

Prerequisites

- MYOB EXO Business v8.7 or higher
- MS.NET 4.0

	Avg Cost From(\$)	Avg Cost To(\$)	Operator	Factor
▶	50.00	99.99	*	1.20
	100.00	150.00	*	1.10
