MYOB Advanced

The MYOB Advanced Autumn Release 2023 has touched down. Boost your experience with brand new features. Get greater visibility with enhancements that streamline your workflows. And experience connectivity that'll blow your mind. Explore every update to MYOB Advanced Business, and unleash your business's full potential.

Single Sign-On

Improve security and efficiency with new Azure Active Directory Single Sign-On.

- Introduction of a new industry standard authentication method.
- Reduce the number of passwords used in your business to improve UX, security and productivity.
- Reduce cognitive load for team members moving between applications.

Context-sensitive help

Get the right help, when you need it with in-product, contextual help.

- New info-tips that explain key fields and labels, to make it even easier to use MYOB Advanced solutions.
- Two user-friendly ways to view more information.
- Reduce the risk of errors and improve productivity with help just a click away.

MYOB Advanced app

New usability enhancements make it even easier to get the job done via the mobile app.

- Customise your menu options, improving UX and productivity.
- Assign colours to companies in both the browser and mobile app, providing a helpful cognitive cue and improving accuracy.

Electronic signature capture

Capture signatures for job approval or goods receipt directly within the MYOB Advanced mobile app.

- Eliminate paperwork with a fully digital receipt capture process.
- Avoid re-keying or manual data entry to improve accuracy and boost efficiency.
- Improve accuracy and audibility with signatures captured at the time of acceptance and attached to the correct record.
- Get paid faster with automated workflows triggered at point of signature capture.

Additional features and enhancements

- Upskill your team with eight new MYOB Academy training courses, covering Sales, Receivables, Purchases, Payables, Banking, Finance and Inventory training.
- Improved diagnostics for business events and push notifications that enable monitoring and troubleshooting of your system queue health.
- New web services end point has been introduced to improve Project-related workflow. Actions are now mapped, automating the various stages of a project cycle.
- Enhancements to the workflow engine have been implemented and users can now, in a workflow state, specify default values for fields that are non-primary data access classes (DACs), improving their workflow.

For more information about this year's Autumn Release, don't hesitate to get in touch with your Customer Success Manager or dedicated Business Partner.
